

## Health Benefits

### Prevents Moisture and Gas Infiltration

Since Spray Foam acts as an air barrier, it also helps to reduce moisture infiltration, which is a source of dangerous mold and mildew growth in the home, and can cause severe health problems to its occupants.

Moisture infiltration can also cause structural damage to your home or building. Protect your family and save money at the same time with Spray Foam insulation systems.

### Helps Reduce Moisture and Mold

Molds produce tiny spores. Mold spores waft through the indoor and outdoor air continually. When mold spores land on a damp spot indoors, they may begin growing and digesting whatever they are growing on in order to survive.

There are molds that can grow on wood, paper, carpet, and foods. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or un-addressed.

There is no practical way to eliminate all mold and mold spores in the indoor environment; the way to control indoor mold growth is to control moisture. Closed-Cell Spray Foam insulation is the key.
